

RAMDHAN VANJARA

Senior Software Engineer – Backend / Full Stack | Node.js • TypeScript • NestJS | MEAN / MERN | Kafka • AWS

+91 70699 89488 | vanjararamdhan@gmail.com | linkedin.com/in/ramdhan-vanjara | Pune, India | Immediate Joiner

PROFESSIONAL SUMMARY

Senior Software Engineer (Backend / Full Stack) with **4+ years** of experience building secure, scalable Node.js/TypeScript applications for **international clients in South Africa, Israel and Poland** across insurance (BFSI), billing & subscriptions, travel, healthcare and enterprise AI domains. Built event-driven data-synchronisation pipelines processing **1-2 million records per day** with Apache Kafka and scheduled jobs, integrated **5 Zoho applications** (CRM, Desk, Mail, People, Bookings) across **3 client platforms**, and **improved API response time by 60%** while maintaining **100% unit-test coverage**. Full stack delivery on MEAN/MERN (MongoDB, Express.js, Angular, React.js, Node.js), with strong REST/GraphQL API design, microservices, API security (OAuth 2.0, JWT) and AWS/Azure. **Led a 10-member backend team for 2.5 years**, owning architecture decisions, code reviews and end-to-end client delivery in Agile/Scrum, and uses AI-assisted development (Claude Code, GitHub Copilot) to ship faster.

CORE COMPETENCIES

Backend Engineering • Full Stack Development (MEAN / MERN) • Microservices Architecture • Event-Driven Systems • REST & GraphQL API Design • System Integration & Data Synchronisation • API Security (OAuth 2.0, JWT) • Database Design & Optimisation • Cloud (AWS, Azure) • CI/CD • Unit & Integration Testing • Requirements Gathering • Client & Stakeholder Management • Technical Leadership & Code Review • Agile / Scrum • Full SDLC Ownership

PROFESSIONAL EXPERIENCE

Product Engineer (Node.js) | Odek Appcraft, Pune

Mar 2025 – Sep 2026

South Africa-based technology company building digital products for banking, tourism and insurance clients.

- Designed and developed backend services on a Node.js microservices architecture across three production platforms: AndBeyond (travel), InsureCraft (insurance) and ICT Billing (billing & subscriptions).
- Built and operated data-synchronisation pipelines processing **1-2 million records per day** using Apache Kafka and scheduled cron jobs, keeping master database tables consistent with external systems.
- Integrated and enhanced **5 Zoho applications (CRM, Desk, Mail, People, Bookings)**, reused across all **3 client platforms**: AndBeyond, ICT Billing and InsureCraft.
- Wrote unit tests and test cases with Jest/Mocha, maintaining **100% code coverage** on delivered modules.
- Led backend development of complex modules, converting client requirements into scalable technical designs and coordinating delivery through Jira-based sprint planning.

AndBeyond – Travel & Tourism Platform (South Africa)

- Engineered core backend architecture and designed an **event-driven sync flow**: Zoho webhooks publish record changes to **Apache Kafka**, and consumers apply them to master database tables. This automation keeps Zoho and the master DB in sync in near real time and removed manual data entry and reconciliation.
- Delivered deep **Zoho CRM API v6** and Zoho Desk integrations: custom sync modules (Accounts, Contacts, Departments, Teams, Tickets), mail-log and attachment sync pipelines, ticket assignment/routing rules and Zoho Analytics reporting queries.
- Resolved production integration issues including OAuth scope mismatches and duplicate-data conflicts; designed database structures for high-volume multi-system synchronisation.
- Secured platform APIs with **JWT authentication and OAuth 2.0 authorisation**; contributed Angular components for account/contact management in the Explorer module.

InsureCraft – Life & Health Insurance Platform

- Delivered policy-management flows for life and health insurance products, enabling end-to-end policy tracking.
- Implemented a bank-details verification workflow for insurance agents/partners to support secure and accurate payout processing.

ICT Billing – Billing & Subscription Platform

- Designed billing logic for multi-service selection with recurring subscription plans, and charge calculation based on usage, subscription value and user type/tier.
- Automated invoice generation for recurring and usage-based billing cycles; built JWT-secured Angular screens for service selection and subscription management.

Internal AI Initiative

- Built a demo application integrating LLM APIs (OpenAI, Claude) to prototype AI-assisted product features.

Backend Developer | Publicis Re:Sources, PuneJul 2024 – Jan 2025

Enterprise technology arm of Publicis Groupe. Project: Marcel (Node.js, GraphQL, Neo4j), an AI-powered platform serving 100,000+ professionals worldwide.

- Developed and maintained Node.js microservices with GraphQL APIs and a Neo4j graph database, powering opportunity discovery, expertise matching and collaboration features at enterprise scale.
- Designed RESTful APIs consumed by multiple frontend squads, meeting high-availability and performance requirements under enterprise load.
- Wrote automated unit and integration tests (Jest, Mocha) and delivered enhancements in Agile/Scrum within a large, globally distributed engineering organisation.

Backend Developer & Team Lead | Koli Infotech Pvt. Ltd., SuratJan 2022 – Jul 2024

IT services company delivering software for domestic and international clients.

- Led a 10-member backend team: owned architecture decisions, conducted code reviews, enforced code-quality standards and managed end-to-end delivery across multiple client engagements.
- Served as primary technical point of contact for international clients, turning non-technical requirements into precise engineering specifications.

Proginter – Server, Domain & Hosting Services Platform (Israel) • Feb 2023 – Jul 2024

- Owned the full project lifecycle, from requirements to deployment, of a platform for server sales, domain registration and hosting services.
- Integrated payment gateways (PayPal, Tranzila) and invoicing (Green Invoice) with token-based API authentication for secure billing workflows.
- Built Molecular.js microservices backed by MongoDB, deployed on Kubernetes and hosted on Azure, with CI/CD pipelines for automated build and deployment.
- Contributed React.js dashboard components for the client-facing portal, completing a full MERN-style stack (MongoDB, Express/Node.js, React.js).

Centrum Menopause – Healthcare Platform (Halion, Poland) • Nov 2022 – Jan 2023

- Built REST APIs with NestJS and TypeScript for a healthcare platform, following enterprise coding standards within a distributed international team (contract assignment).
- Improved API response time by 60% and delivered modules with 100% unit-test coverage.

AMS – Assets Management System • Aug 2022 – Oct 2022

- Led full-cycle development (Node.js, MySQL) of the company's first in-house product, which remains in active production use.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, SQL
Full Stack	MEAN and MERN (MongoDB, Express.js, Angular / React.js, Node.js)
Backend	Node.js, NestJS, Express.js, Molecular.js, Microservices, Event-Driven Architecture
APIs & Integration	REST, GraphQL, Zoho (CRM, Desk, Mail, People, Bookings, Analytics), PayPal, Tranzila, Green Invoice, LLM APIs (OpenAI, Claude)
Messaging & Jobs	Apache Kafka, AWS SQS, Webhooks, Cron jobs
Databases	MySQL, PostgreSQL, MongoDB, Neo4j, Redis, Sequelize ORM
Cloud & DevOps	AWS (S3, Lambda, SQS, IAM), Azure, Docker, Kubernetes, CI/CD, GitHub Actions
Security	OAuth 2.0, JWT, token-based API authentication
Testing	Jest, Mocha
Frontend	Angular (6+ months, production), React.js (production dashboards), Tailwind CSS, Bootstrap
Tools	Git, Jira, Postman, Swagger, Claude Code, GitHub Copilot

EDUCATION

MCA | Gujarat Technological University, AhmedabadOct 2020 – Jun 2022

BCA | Veer Narmad South Gujarat University, SuratAug 2017 – Feb 2020

CERTIFICATIONS & TRAINING

- Zoho APIs and CRM – Professional Course
- Domain Names, DNS & Hosting – Udemy
